Malindu Peiris

Full-Stack Software Engineer

I am an undergraduate at the Sri Lanka Institute of Information Technology (SLIIT), pursuing a Bachelor of Science in Software Engineering, and a student at the Institute of Computer Engineering Technology (iCET). As an aspiring software engineer, I am passionate about building real-world full-stack applications using modern technologies. I am eager to contribute my skills to a professional team, grow through hands-on experience, and deliver high-quality software solutions.

ACADEMIC PROJECTS

- **Construction ERP System - Project Management & Resource Planning Platform**

  Java Spring Boot, Angular, Spring Security, Flyway, MySQL, JWT, REST API, Swagger

  - Built a full-stack construction ERP system as a 10-member academic group project at iCET, featuring five role-based dashboards for Admin, Project Manager, Engineer, Accountant, and Worker using Spring Boot and Angular.
  - Secured the application with JWT authentication and role-based access control using Spring Security with protected route guards on the frontend.
  - Managed database schema using Flyway versioned migration scripts and built RESTful APIs with DTO patterns, global exception handling, and Swagger documentation.
  - Developed modules for Project Management, Task Assignment, Procurement, Budget Tracking, Equipment, Document Upload, and Supplier Management.
  - Implemented a Client View portal for external clients and used lazy-loaded Angular modules with a JWT interceptor for automatic token attachment.

- **Smart Travel System - Travel Management & Booking Platform**

  React.js, Node.js, Express.js, MongoDB, Cloudinary, JWT, REST API

  - Developed a full-stack smart travel platform as a 6-member academic group project at SLIIT, featuring role-based portals for Traveler, Tour Guide, Hotel Owner, and Admin.
  - Built modules for Hotel Booking, Tour Package Booking, Travel Guide Booking, Location Exploration, Trip Planner, Travel Product Store, and an Emergency Assistance page.
  - Implemented JWT-based authentication with role-specific protected routes for Admin, Hotel Owner, Guide, and regular Traveler users.
  - Integrated Cloudinary for image uploads across hotels, tour packages, guides, and products, and connected a real-time Weather API for destination weather information.
  - Developed an Admin dashboard to manage users, hotels, tours, guides, locations, products, and payments from a single control panel.

- **SkyLink - Airline Reservation System**

  Java Spring Boot, Spring Security, Thymeleaf, JPA, MySQL, REST API

  - Developed a full-stack airline reservation system as a 6-member academic group project at SLIIT, featuring role-based dashboards for Passenger, Admin, Finance Officer, IT System Engineer, and Support Staff.
  - Built modules for Flight Search & Booking, Seat Selection, Passenger Management, Payment Processing, Promotions & Deals, Customer Support Tickets, and Finance Reporting.
  - Secured the application using Spring Security with a custom authentication success handler that redirects each user role to its specific dashboard after login.
  - Applied Singleton design patterns for key system components including Audit Logger, Cache Manager, Configuration Manager, Database Connection Pool, and Notification Service.
  - Implemented DTO-based data transfer across all layers with a clean separation of Controller, Service, and Repository, following standard Spring Boot architecture.

---

- **TableBookNow - Restaurant Reservation System**

  Java (JSP/Servlets), JDBC, HTML/CSS, JavaScript, File-based Storage

  - Developed a full-stack restaurant reservation web application as a 6-member academic group project at SLIIT, featuring role-based dashboards for Customers and Admins supporting end-to-end table booking workflows.
  - Built modules for Table Selection, Date & Time Scheduling, Menu Pre-ordering, Payment Processing, QR Code Generation, Email Notifications, and Customer Reviews.
  - Secured the application with session-based authentication and role-based access control, redirecting users and admins to their respective dashboards upon login.
  - Applied Queue data structures for managing reservation and payment processing flows, implementing custom ReservationQueue and PaymentQueue utility classes.
  - Implemented a DAO-based data access layer with a clean separation of Controller (Servlets), Service, Model, and DAO layers, following standard MVC architecture.
